The GRN FISH probe is designed to hybridize to the GRN gene on 17q21.31 and is primarily used for detecting amplifications and deletions associated with the gene. This probe is FISH confirmed on normal peripheral blood metaphase spreads and interphase nuclei. The probe can be labeled in one of five colors, using standard Nick Translation protocols. Each probe is sold in a 20 test kit (approximately 20 slides - 22x22 mm area) and includes hybridization buffer. ASR and CE marked probes are available upon request. Please also note that due to design optimizations, prices are subject to change.

GRN FISH Probe (17q21.31)

Ordering Instructions:
To order the GRN FISH Probe, visit https://www.empiregenomics.com/fish-probes/gene/GRN or contact our office at (716) 856-3873.

* For in vitro use only | CE marked in certain countries | RUO in US and other countries
